

OVERVIEW

- Still monitoring the evolution of Hurricane Lee through this week

Key Messages for Hurricane Lee Advisory 26: 5:00 PM AST Mon Sep 11, 2023

1. Dangerous surf and life-threatening rip currents will affect portions of the northern Leeward Islands, the Virgin Islands, Puerto Rico, Hispaniola, the Turks and Caicos Islands, the Bahamas, Bermuda, and most of the U.S East Coast through much of the week.
2. Lee could bring strong winds, rainfall, and high surf impacts to Bermuda later this week. Interests there should continue to monitor updates to the forecast of Lee during the next several days.
3. It remains too soon to know what level of additional impacts Lee might have along the Northeast U.S. coast and Atlantic Canada late this week and this weekend. However, wind and rainfall hazards will likely extend well away from the center as Lee grows in size. Users should continue to monitor updates to the forecast of Lee during the next several days.

For more information go to hurricanes.gov

TIMING

- Earliest reasonable time for tropical storm force winds: Friday afternoon
- Most Likely reasonable time for tropical storm force winds: Friday night

HAZARDS & IMPACTS

- Most probable impacts will be rough surf, rip currents and beach erosion
- Strong winds and heavy rainfall are also possible, but will depend more heavily on the exact track of Lee

NWS ALERTS

- None at this time

FORECAST CHALLENGES

- The exact track and timing of Lee. A track farther to the west would bring more wind and flooding impacts to southern New England.

ADDITIONAL INFORMATION

- The forecast details should come into better focus towards Wednesday/Thursday.

POST-EVENT OUTLOOK

- Mainly dry weather expected Sunday into Monday. Near to slightly above normal temperatures.

NEXT BRIEFING

- By 6 AM Tuesday
